

INTRODUCING

A better approach to data center cooling

- **Replaces traditional large air handlers**
 - Small units under each server rack
 - Virtually linked together for pod level control
 - Physically connected to eliminate underfloor plenum
- **Responds to varying heat loads dynamically at the pod level**
 - Eliminates hot spots
 - Delivers cooling air as needed
 - More energy efficient
- **Easily scales to meet unpredictable future requirements**
- **Patents Pending**

The **gold** standard for future ready data center cooling
